CORD*

Preparing Technicians for the  
**FUTURE OF WORK**

[preparingtechnicians.org](http://preparingtechnicians.org)

**CORD**  
*Leading Change  
in Education*

# Project Goals

1. Empower community colleges to prepare technicians for the work of the future.

---
2. Promote regional collaboration between community colleges and industry to determine the technical demands of work of the future.

---
3. Support ATE Regional Networks focused on technician education for the work of the future.

---
4. Foster implementation of the cross-disciplinary STEM core to maximize impact on technician education.

# What's Happening?

- Nature of work changing at unprecedented speeds
- Technology advancements in machine learning, AI, IoT, and robotics eliminating some jobs, creating others
- Technicians sit at the center of much of this disruption
- Education must keep up
- Our students' career paths will evolve

Preparing Technicians for the  
**FUTURE OF WORK**

[preparingtechnicians.org](http://preparingtechnicians.org)

# Future-proofing STEM Technicians

---

## *The Cross-Disciplinary STEM Core:*

Skill Area 1: Data Knowledge and Analysis

Skill Area 2: Advanced Digital Literacy

Skill Area 3: Business Knowledge and

Processes

---

**By Integrating the Cross-Disciplinary STEM Core  
into Technical Programs**

# At Our Beginnings

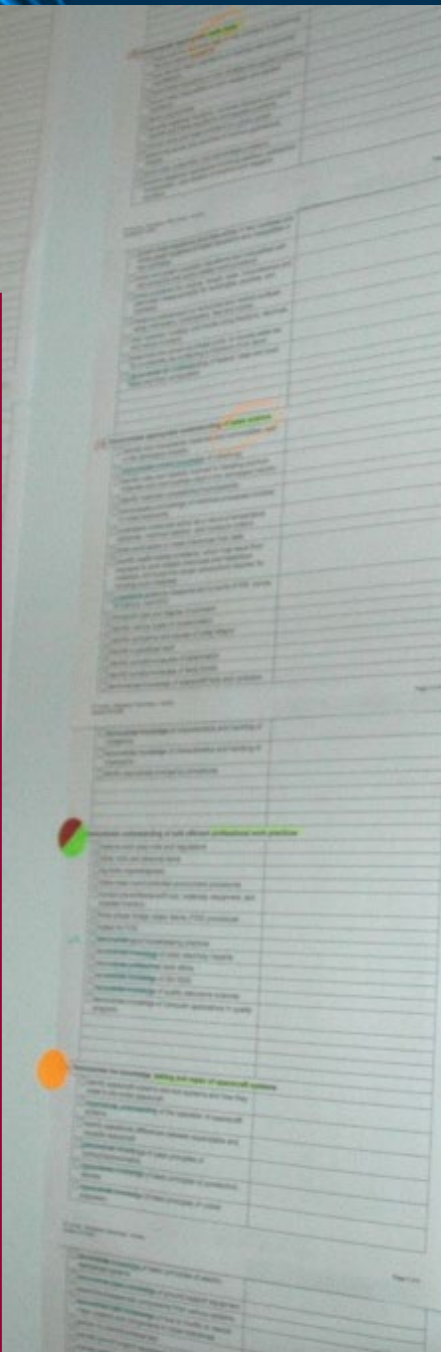

42 Industry Partners  
22 Academic Partners  
9 Community Organizations

**Demonstrate proficiency in integrating production equipment area controllers**

- design analog and digital control systems along with applicable software to specific manufacturing requirements
- chart and analyze ladder logic diagrams for manufacturing processes
- develop and analyze flow charts from ladder diagram related process controls
- operate Programmable Logic Controllers with device drivers
- apply software to workcells and area controllers
- integrate control systems and equipment with production and production support mechanisms

**Demonstrate proficiency in bar coding, automatic tracking systems for materials handling**

- describe automatic inventory accounting and control system
- list the underlying principles and method of controlling in progress
- analyze product flow cycle
- describe warehouse throughput systems
- implement automated tracking in the laboratory environment
- describe machine vision applications
- maintain machine vision and sensing system equipment

MSSC

- Production
- Health, Safety, environment
- ⑤ Logistics & Inventory control
- Maintenance, installation & repair
- Production process dev.
- Quality

# AS Engineering Technology Degree

## ET Degree Components

### I. General Education: 15 -18 hours

English    Humanities    Math    Science    Social Science

### II. ET Technical Core: 18 credit hours

Computer Aided Design	Electronics
Manufacturing Processes & Materials	Quality
Mechanics & Instrumentation	Safety

### III. 11 Specialization Tracts: 24 – 27 credit hours

Advanced Manufacturing	Electronics
Alternative Energy	Mechanical Design & Fabrication
Advanced Technology	Quality
Biomedical Systems	Relay Substation
Digital Design & Modeling	Supply Chain Automation
Digital Manufacturing	Advanced Industrial Automation

### ET Degree GOALS:

- Increase enrollment.
- Provide multiple entry and exit options.
- Meet industries' workforce needs for skilled technicians.
- Remove course duplications.
- Integrate Industry-approved credentials.

# Florida Manufacturers' Choice of Vocabulary

- 1 Ask 5 Whys
- 2 Brainstorming
- 3 Cloud
- 4 Critical Thinking
- 5 Data Integrity
- 6 Programming
- 7 Prototyping
- 8 Quality Testing
- 9 Test & Executing
- 10 Three D Printing
- 11 Write SOP

- 12 Data Interpretation
- 13 Destructive Testing
- 14 Fishbones
- 15 Integrating Systems, PLC
- 16 Interdisciplinary Skills
- 17 Material Knowledge
- 18 Material Testing
- 19 Provide Design Data
- 20 Reverse Engineering
- 21 Support Mockup/Test
- 22 Troubleshooting
- 23 Use Root Cause Analysis

- 24 Awareness of the Security Requirements
- 25 Basic Understanding of Databases & Networks
- 26 Building/ Assembling Prototypes
- 27 CAD Layout for Production Processes
- 28 Diagnose & Understand Full Process
- 29 Ensure Measurement has Uncertainty Stated
- 30 Human Factors and Interactions
- 31 Identify Opportunities for Improved Products
- 32 Integration Eng. Tech. / Adv. Mfg. / Computing
- 33 Knowledge of Product Standards and Regulations
- 34 Math, Communication, Teamwork, Solve Problem
- 35 Spreadsheet Creation & Manipulation
- 36 Use Technical Tools to Identify Root Causes
- 37 Write Technical Reports including Data

***Skills are not prioritized,  
but are arranged for easy  
visual review***

# Skill matched to the Florida Department of Education Standards and Benchmarks

- 1 Ask 5 Whys
- 2 Brainstorming
- 3 Cloud
- 4 Critical Thinking
- 5 Data Integrity
- 6 Programming
- 7 Prototyping
- 8 Quality Testing

## Data Knowledge and Analysis

Manipulate and interpreting data to resolve issues and using Excel and other common software proficiency to accomplish tasks

**DATA KNOWLEDGE AND ANALYSIS** For Students  
**Data Visualization**

**What is Data Visualization?**  
Data visualization represents information in the form of a chart, diagram, picture, or infographic so that the data can be quickly and easily understood. Technicians use data visualization software to create graphics that communicate complex and relational information to a variety of audiences.

**How will a technician use data visualization?**  
Evan Garcia is a technician for Green Mountain Power Company. He is responsible for tracking increased system outages over time across a metropolitan network, collect outage statistics, including system logs, environmental information, and helpdesk ticket details from network nodes and service centers in order to determine the cause. Evan stores the data in an Excel workbook, then imports data into SAS, Tableau, or MS Power BI visualization tools and creates a dashboard to present to management. The data dashboard provides an interactive geographical heat map showing outage details and other graphical representations of his data analysis of the event. The heat map allows management to make real-time decisions and troubleshooting problems.

**Vocabulary**

- **Dataset** - a collection of data, often organized in a spreadsheet or database
- **Chart** - a graphic representation of data, examples are charts, pie charts, histograms, line graphs for example
- **Scale** - marks on a visualization that indicate the range of data values presented. A scale on a graph reflects the magnitude of the data presented.

**Common Types of Data Visualization**

- A pie chart uses "pie slices" to show relative sizes of data.
- A histogram uses bars of different heights to group data into ranges.
- A scatter plot uses points plotted on an XY axis to show the relationship between two sets of data.

**A heat map uses a color spectrum to represent data values by color.**

- Data Visualization
- Data Literacy/Fluency
- Data Visualization

## Advanced Digital Literacy

Understanding digital communications and networking, cybersecurity, machine learning, sensors, programming, and robotics at a higher than introductory level

**Advanced Digital Literacy** For Students  
**Network Communications - Internet of Things (IoT)**

**What is the Internet of Things (IoT) and how is it related to network communications?**  
The Internet of Things (IoT) consists of physical devices connected to the Internet. IoT devices are a combination of sensors, software, and electronics that connect to a central location usually in the cloud. They are often connected through a wireless network through which they communicate with one another and feed information to a user's mobile device or computer. Through the device, the user can monitor a condition or control a process through a control panel or dashboard, known as the Human Machine Interface. Internet-connected devices, thermostats, speaker systems and wearable fitness trackers are everyday examples of IoT devices. In industry, a variety of sensors monitoring quality and machine operational parameters for preventative maintenance.

**How will technicians use network communications and IoT technologies?**  
Network Communication Technicians familiar with IoT technologies will install, monitor, and maintain the IoT devices and the network communication software that connects them to ensure proper operation. This includes tasks such as installing software updates, developing procedures to detect and prevent system fading, testing the network for malware, and troubleshooting system malfunctions. Their job often requires creative problem solving, as in this example:

**Vocabulary**

- **Smart sensors** - devices that receive and process data before sending it to a centralized source. Flow sensors used to measure water and natural gas usage - smart meters - are an example
- **Cloud computing** - delivery and storage of data over the Internet rather than on the Google's grid is an example
- **Information security** - processes used to protect information from unauthorized access, modification, or destruction. Requiring password entry to access devices and content is an example.

**A company that manages large parking garages wanted to reduce the time its customers spend searching for open parking spots. Some drivers spend several minutes driving up and down multiple floors to find an open parking spot. The distracted drivers looking for open parking spots are also a hazard to other cars and pedestrians. A network technician assigned to investigate a solution after receiving several tickets, the network technician decided to implement an IoT solution that includes sensors, signs, and a mobile app. IoT sensors were installed to monitor the status of each parking spot. The status of each parking spot was sent to a centralized computer. If a spot was available, signs throughout the garage would provide directions to the exact location on the garage floor to the open parking spot. The status of each parking spot was also available on a mobile app to let people know before entering the garage how many spots were available and on what floor. The IoT solution reduced customer wait times, increased safety, and increased parking garage profits.**

- Automation/Robotics/HMI
- Basic Programming-Python
- Digital Twins
- Network Analysis

## Business Knowledge and Processes

Understanding the value chain and business practices of an enterprise and applying principles of ethical adoption of new technology

**Business Knowledge & Processes** Student Resource  
**ENTREPRENEURSHIP**

**What is Entrepreneurship?**  
Entrepreneurship is the concept of developing and managing a new business for profit. Working inside a company and thinking like an entrepreneur by asking "How can we improve this process?" is just as important. Entrepreneurship means thinking beyond troubleshooting or problem solving. It means taking steps after that seeks potential new products, services or processes.

**How will an entrepreneurial mindset be used in the workplace?**  
An industry 4.0 technician of tomorrow needs creative entrepreneurial thinking on a new, unexpected task. John Brown is an automotive technician at Advanced Auto. John's boss and his team have experienced several customer complaints regarding repair times. Using an entrepreneurial mindset, John identified the problem and then researched possible solutions and their value propositions. He asked questions like: How much is customer satisfaction and loyalty worth? and how much time and money can be saved through more accurate diagnosis and efficient repair? His own approach to superior about a potential solution he has researched that will provide better customer service, shorter wait times, and fewer errors by the technicians, resulting in higher profits for the business.

**Vocabulary**

- **Entrepreneur** - an individual who starts a new business venture. Typically, the individual who takes on most of the risk and develops the business concept.
- **High-risk** business enterprise in which the expectation of gain is accompanied by the risk of loss or failure.
- **Capital** - the wealth or assets available to invest in a business.
- **Business Model** - a description of how a business will be able to create and deliver value and become profitable.
- **Market Research** - relevant data that helps demonstrate market potential for a business venture.
- **Intellectual Property** - thinks or inventions that is the result of creativity, to which one has rights and can apply for a patent, copyright, or trademark.

**In another example, Casey Sanders is a robotics technician at Cooper Robotics, an automated filling and packaging company. Over the last several days, a robot gripper has been dropping every hundredth unit. The fault affected everything down the line, to the point at which several boxes shipped to a customer were short a few units. This is clearly not an acceptable business practice. Casey applied troubleshooting skills to**

## Data Knowledge and Analysis

*Manipulating and interpreting data to resolve issues and using Excel and other common software proficiently to accomplish tasks*

**DATA KNOWLEDGE AND ANALYSIS**  
Data Visualization

**What is Data Visualization?**  
Data visualization represents information in the form of a chart, diagram, picture, or infographic so that the data can be quickly and easily understood. Technicians use data visualization software to create graphics that communicate complex and relational information to a variety of audiences.

**Vocabulary**

- Dataset** - a collection of data, often organized in a spreadsheet or database.
- Chart** - a graphic representation of data, examples are charts, pie charts, histograms, bar graphs for example.
- Scale** - marks on a visualization that indicate the range of data values presented. A scale on a graph reflects the magnitude of the data presented.

**Common Types of Data Visualization**

- A pie chart uses "pie slices" to show relative sizes of data.
- A histogram uses bars of different heights to group data into bins.
- A scatter plot uses points plotted on an X/Y axis to show the relationship between two sets of data.

**How will a technician use data visualization?**  
Evan Garcia is a technician for Green Mountain Power Company. He is responsible for tracking increased system outages over time across a metropolitan network, collects outage statistics, including system logs, environmental information, and helps to ticket details from network nodes and service centers in order to determine the cause. Evan shows the data in an Excel workbook, then imports data into SAS, Tableau, or MS Power BI visualization tools and creates a dashboard to present to management. The data dashboard provides an interactive geographical heat map showing outage details and other graphical representations of his data analysis of the event. The heat map allows management to make real-time decisions and troubleshoot problems.

**A heat map uses a search to color spectrum to represent color values by color.**

**Vocabulary**

- Graph** - a diagram that represents data relationships or trends. It is a visual representation of data.
- Heat map** - a visualization that uses color to represent the magnitude of data values. It is a type of data visualization.
- Scatter plot** - a type of data visualization that shows the relationship between two sets of data.

**Common Types of Data Visualization**

- A pie chart uses "pie slices" to show relative sizes of data.
- A histogram uses bars of different heights to group data into bins.
- A scatter plot uses points plotted on an X/Y axis to show the relationship between two sets of data.

## Advanced Digital Literacy

*Understanding digital communications and networking, cybersecurity, machine learning, sensors, programming, and robotics at a higher than introductory level*

**Advanced Digital Literacy**  
Network Communications - Internet of Things (IoT)

**What is the Internet of Things (IoT) and how is it related to network communications?**  
The Internet of Things (IoT) consists of physical devices connected to the Internet. IoT devices are a combination of sensors, software, and electronics that connect to a central location, usually in the cloud. They are often connected through a wireless network through which they communicate with one another and feed information to a central location. Through the device, the user can monitor a condition or control a process through a central point or dashboard known as the human-machine interface. Internet-connected devices, thermostats, weather systems and smart home systems are everyday examples of IoT devices. In industry, a variety of sensors monitoring quality and machine operational parameters for preventive maintenance.

**How will technicians use network communications and IoT technologies?**  
Network Communication technicians familiar with IoT technologies will install, monitor, and maintain the IoT devices and the network communication software that connects them to ensure proper operation. This includes tasks such as installing system updates, developing protocols to detect and prevent system failures, leading the network through a controlled process to update or control a process through a central point or dashboard known as the human-machine interface. Internet-connected devices, thermostats, weather systems and smart home systems are everyday examples of IoT devices. In industry, a variety of sensors monitoring quality and machine operational parameters for preventive maintenance.

**Vocabulary**

- Smart sensors** - devices that receive and process data before sending to a centralized server. Raw sensors used to measure water and natural gas usage - smart sensors - use an internet connection to deliver and manage data over the internet rather than on-site. Google's smart sensors are an example.
- Information security** - processes used to protect information from unauthorized access, modification, or destruction. Helping prevent entry to access devices and content is an example.

### Instructional Activity Cards:

- Network Communications – Internet of Things
- Automation/Robotics/HMI
- Basic Programming-Python
- Digital Twins

- AI and Machine Learning

## Business Knowledge and Processes

*Understanding the value chain and business practices of an enterprise and applying principles of ethical adoption of new technologies*

**Business Knowledge & Processes**  
ENTREPRENEURSHIP

**What is Entrepreneurship?**  
Entrepreneurship is the concept of developing and operating a new business for profit. Developing a new company and bringing the idea to market. Entrepreneurship means finding, leading, motivating, and managing a business venture. It involves taking risks that other people see as too high, creating new products, services or processes.

**How will an entrepreneurial mindset be used in the workplace?**  
An industry 4.0 technician of tomorrow needs creative and entrepreneurial thinking and a more experimental skill set. Students in an industrial technician or advanced skills program will learn to experiment, create, and solve problems. They will learn to identify a problem and then research possible solutions and their own ideas. They will learn to work with others to solve a problem and they will learn to work with others to solve a problem. They will learn to work with others to solve a problem.

**Vocabulary**

- Entrepreneur** - an individual who starts a new business venture. Typically, the individual who takes on most of the risk and develops the business concept.
- Venture** - a business enterprise in which the expectation of gain is accompanied by the risk of loss or failure.
- Capital** - the wealth or assets available to invest in a business.
- Business Model** - a description of how a business will be able to create and deliver value and become profitable.
- Market Research** - research that helps determine market potential for a business venture.
- Intellectual Property** - works or inventions that are the result of creative ideas, which are brought to life and can apply to patents, copyrights, or trademarks.
